

Potassium Iodide Administration Parent/Guardian Informed Consent Form

Reason for Taking Potassium Iodide (KI)

In the event of a major incident at the nuclear power plant or what is also known as a radiological emergency, radioactive iodine will be released into the air. This material may be inhaled or ingested and enter the thyroid gland where it can cause cancer and/or disease. Children and infants are the most vulnerable to this occurrence. When taken by pill or liquid, potassium iodide (KI) floods the thyroid with non-radioactive iodine and prevents the thyroid from absorbing the radioactive material. Potassium iodide needs to be given before or shortly after exposure to radiation. Potassium iodide works only to prevent the thyroid from absorbing radioactive iodine.

Potential Side Effects of Potassium Iodide

It is possible to experience **any or all** of the following side effects when taking Potassium Iodide:
